Education

Sciences Po — Paris, France
Master in Economics, research track — *Sep 2025 – Jun 2027 (expected)*

- Recipient of the **Kellen Scholarship**, a merit-based tuition waiver awarded by Sciences Po
- Top result: Econometrics 1 (Probability & Statistics) **17.5/20 (6/34)**
- Current coursework: Treatment Effects, Heterogeneity & Finance, Financial Economics, Public Economics, Economic History, Economics of Crime
- Research interests: household finance, macro-finance, credit allocation

ENSAI — Rennes, France
Diplôme d'Ingénieur statisticien, economics track – dual degree with Sciences Po — *Sep 2023 – Jun 2027 (expected)*

- Top results: Macroeconometrics **18/20 (6/54)**, Microeconomic Modeling **19.5/20 (3/38)** and **16.6/20 (5/155)**
- Coursework: measure-theoretic probability, inference, generalized linear models, time series, non/semi-parametric estimation, survey sampling, machine learning

Classe Préparatoire aux Grandes Écoles (CPGE D2) — Lyon, France
Economics, mathematics & statistics — *Sep 2021 – Jun 2023*

Research Experience

Global Impact Metrics (GIM) — Paris, France
Research Analyst Intern – applied economics consulting firm — *May 2026 – Aug 2026*

- Built from scratch a large-scale R pipeline for a labor-market research project, scaling up a published methodology; delivered a proof of concept that the firm is now developing for client work
- Implemented hybrid retrieval (sentence embeddings, BM25, reciprocal rank fusion) and LLM-based scoring through an API, with checkpointing to run the full batch reliably
- Harmonized several international and French occupational classifications (O*NET, SOC, ISCO-08, PCS 2020) and worked with French census microdata

Banque de France — Rennes, France
Statistics Intern – regional business surveys — *May 2025 – Aug 2025*

- Built an assignment engine (integer programming, Google OR-Tools) allocating ∼4,000 firms to survey officers to maximize response under capacity, group and geographic constraints; now used in production
- Tested non-response bias on 14,004 rated firms: respondents' default probability was 30% lower (weighted t-test, bootstrap variance), but regressions showed no effect on surveyed turnover growth
- Designed a stratified probability sampling plan by industry and rebuilt the sector weights; plan adopted by the team

ENSAI Research Project – Signature Theory in Oncology — Rennes, France
Team of 5, supervised by Stéphane Chrétien (Université Lyon 2) — *2024 – 2025*

- Simulated tumor DNA trajectories with a birth–death process and built classifiers on path signatures (Lévy-area test with Benjamini–Hochberg FDR control, SVM, GAM); wrote a 35-page paper in English

Volunteering & Activities

Conférence Olivaint — Paris, France
Member, Economics Committee — *Oct 2025 – Present*

- Selective association (founded 1875) for public speaking and public affairs; co-moderated two public conferences

Archelon – Sea Turtle Protection Society of Greece — Lakonikos Bay, Greece
Field Volunteer — *Summer 2024*

- Protected loggerhead turtle nests during the nesting season; ran public awareness sessions

Skills

Programming: R (tidyverse, data.table), Python, Stata, Julia, SQL, Java, VBA
Tools: Git & GitHub, Hugging Face, LaTeX
Languages: French (native), English (C1 – TOEFL, TOEIC), Italian (B2 – CILS), Japanese (elementary)
